DAVID GARRICK, Esq.

S I R,

THE same motives which induced me to solicit your patronage for the General Idea of a Pronouncing Dictionary, have determined me to prefix your name to the present work. If either have a sufficient degree of merit to recommend them to the attention of the public, it is in a great measure owing to the early opportunities I have had of observing your pronunciation on the stage, and the frequent advice you have favoured me with in the prosecution of my enquiries. Without any apology, therefore, I present you with a production, which, if useful to the public, will be allowed to be properly addressed to you; and, if worthless, will at least be a proof of your
rea-

readiness to encourage even the faintest endeavours in the service of the muses ; a disposition which will raise you a nobler monument with posterity than that delicate distinction of character, that intensely animated expression, in which you excel as an actor, or that strenuous perseverance in the arduous duties of a manager, which has so largely contributed to the credit and improvement of the English stage.

I am,

S I R,

with the utmost respect,

Your most obedient Servant,

J. WALKER.

INTRODUCTION.

AMONG the various attempts to facilitate the orthography and pronunciation of the English language, it is not a little surprising that the method here adopted should have been either totally overlooked or neglected. A rhyming dictionary in a living language, for the purposes of poetry, seems no very unnatural or useless production, and imperfect sketches of such a work have already been given us by Poole and Byshe; but no one has hitherto thought of making a dictionary of terminations subservient to the art of spelling and pronouncing. The more obvious use of a work of this kind was perhaps an obstacle to the completion of it, and its latent, though more useful qualities, were by this means unobserved. A mere rhyming dictionary was looked on either as a bauble for school-boys, or a resource for poetasters; and the nobler ends of pointing out the analogy of orthography and pronunciation, like many other advantages, were overlooked in the insignificancy and puerility of the means.

Johnson's Dictionary is scarcely more valuable for so nicely tracing the various and almost vanishing shades of the same word, than for furnishing us with so copious a collection of nearly similar words of a different form. Those who understand the harmony of prose, pay a cheerful tribute to Dr. Johnson on this account, as he admits them to a more easy and extensive view of the powers of the language, than can possibly be suggested by the memory alone; and by this means assists that delicacy of choice on which the precision and harmony of expression so essentially depend. This advantage, which perhaps was not foreseen by Dr. Johnson himself, was no more than a necessary, though not an obvious, consequence of so copious and perfect a distribution of the language into its constituent parts; and without the vanity of
pretending

pretending to a parallel, it may naturally be presumed, that an arrangement, which is perfectly new, may possibly produce advantages which were entirely unnoticed before this arrangement was actually drawn out; for experience furnishes us with a variety of instances of unexpected improvements arising from new, and perhaps fortuitous combinations, which were never suspected by theorists, until a discovery had been made.

The English language, it may be said, has hitherto been seen through but one end of the perspective; and though terminations form the distinguishing character and specific difference of every language in the world, we have never till now had a prospect of our own in this point of view. Dr. Wallis has, with great penetration and sagacity, shown the general import of initial consonants; and with more appearance of truth than could have been conceived, has evinced, that words of a similar signification, which are radically English, commence with nearly the same radical articulations. Mr. Elphinston too has given us a very good idea of the general import of terminations by strictures on the greatest part of them; but none have yet thought it worth their while to give us a complete and alphabetical enumeration of the whole, by which alone we can have an adequate idea of every part. In this arrangement of the language, we easily discover its idiomatic structure, and find its several parts fall into their proper classes, and almost every word as much distinguished by its termination as its sense. We at one glance perceive the peculiar vegetation of our own language, and the alteration foreign words undergo, by being transplanted into English soil. And thus by an acquaintance with the specific character of every termination, we are the more readily led to assimilate foreign terms, by stamping them with the current impression of our own.

ORTHOGRAPHY.

But an analogical insight into the recesses of formation, is not every advantage arising from this new and complete prospect of it. Our orthography is not only an insuperable difficulty

difficulty to foreigners, but an eternal source of dispute and perplexity to ourselves; and though it would be in vain to think of removing every intricacy that is constantly arising from indolence and caprice, yet that a considerable number may be remedied by a view of the general laws of formation, will be readily conceived by those who enquire into the origin of the difficulties complained of. By an affectation of approximating to the orthography of the learned languages, we have rooted out many useful letters that sprung up naturally with exotic words, and have been led to exclude all letters in our compounds which are not actually pronounced, though their existence in these words is often no less necessary to prevent ambiguity than in the simples themselves.

Thus the useful servile *e* is hardly ever suffered to have a place in composition, though from a feeling of its importance, we are almost intuitively tempted to let it remain in the branches, whenever we recollect it in the root. The omission or insertion of this letter occasions a numerous catalogue of rules and exceptions. The other serviles *l*, *s*, &c. are no less absurdly omitted in composition, though their power remains, and by this means both orthography and pronunciation are confounded. The duplication of consonants, when an additional termination is assumed, forms another difficulty in our terminational orthography, as it may be called, which has embarrassed the most correct and accurate writers. Now the only clew to extricate us from this labyrinth seems the method here adopted. An immediate view of the similar formation of similar parts of speech, gives us a competent idea of the laws of terminational orthography, and enables us to detect the least violation of them. Thus when in our best dictionaries I find *saleable*, *tameable*, and a few other words of the same form, retain the silent *e*, I conclude these are either slips of the pen, or errors of the press; for that the whole current of similar endings, as *blamable*, *adorable*, *definable*, &c. omit the *e*, and that no reason appears for retaining it in the former, and not in the latter words.

But in order to detect the orthographical irregularities of our language, it will be necessary first to lay down such general maxims in spelling as have almost universally taken place. By these we may judge of the impropriety of those deviations, which are owing perhaps to a want of seeing the laws of formation as here exhibited, and knowing how far the irregularity extends.

ORTHOGRAPHICAL APHORISMS.

A P H O R I S M I.

Monosyllables ending with *f*, *l*, or *s*, preceded by a single vowel, double the final consonant; as *staff*, *mill*, *pass*, &c. *of*, *if*, *as*, *is*, *has*, *was*, *yes*, *us*, *thus*, are the only exceptions; and *add*, *butt*, *cann*, *ebb*, *egg*, *odd*, *err*, *buzz*, are the only words where other consonants are doubled in the same situation.

A P H O R I S M II.

Words ending with *y*, preceded by a consonant, form the plurals of nouns, the persons of verbs, verbal nouns, past participles, comparatives, and superlatives, by changing *y* into *i*; as *spy*, *spies*, *I carry*, *thou carriest*, *he carrieth*, or *carries*, *carrier*, *carried*, *happy*, *happier*, *happiest*; but the present participle in *ing* retains the *y*, that *i* may not be doubled, as *carrying*; *y* preceded by a vowel is never changed, as *boy*, *boys*, *I cloy*, *he cloys*, &c.

O B S E R V A T I O N S.

By this rule we may perceive the impropriety of writing *flyer* for *flier*, and *desyer* for *desier*, and the still greater impropriety of writing *fatner*, *oftner*, and *softner*, for *fattener*, *oftener*, and *softener*; though we meet with them in our best dictionaries; for the common terminations of verbs, verbal nouns, participles, &c. never occasion any contraction in the radical word; *entrance* and *remembrance* pretend kindred with the French *entrant* and *remembrer*, and are therefore incorrigible; but *wondrous* ought to be written with the *e*, as well as *slanderous*, and if we write *dexterous*, why should we see *sinistrous*?

A P H O R I S M III.

Words ending with the hissing consonants *ch*, *s*, *sh*, *x*, *z*, form the plural of nouns, by adding *es*, and the persons of verbs by *est*, *eth*, or *es*, as *church*, *churches*, *I march*, *thou marchest*, *he marcheth*, or *marches*. Genitives of words ending in these consonants are formed by adding *s* with an apostrophe; as *St. James's church*, the *church's ceremonies*.

A P H O R I S M IV.

Words ending with any consonant and silent *e*, form their plural, by adding *s* only; as a *place*, *places*, and persons of verbs

verbs by adding *st*, *th*, or *s*; as *I place, thou placest, he placeth, or places*. Genitives of words ending with these letters are formed by adding *s* with an apostrophe; as the *place's pleasantness*. Material adjectives in *y*, and comparatives in *ish*, are formed from substantives of this termination by omitting the silent *e*, and annexing *y* or *ish* to the consonant, as *ropy, winy, slavish, swinish, &c.* from *rope, wine, slave, swine, &c.* The past participles, verbal nouns, and comparatives and superlatives, add *d*, *r*, *r*, and *st*, to the simple; as *placed, a placer, wiser, wisest*; but the present participle cuts off the *e*, and annexes *ing*, as *placing*. However, where the silent *e* is preceded by the soft *g*, the *e* must be preserved, if the sense of the word would otherwise be ambiguous; for we have no other means of distinguishing *singeing*, the participle of *to singe*, from *singing*, the participle of *to sing*; *swingeing* from *swinging*, &c. as to *cringing, twinging, &c.* from *cringe, twinge, &c.* we trust to the common power of the letters, as we have no verbs to *cring, twing, &c.* to occasion any mistake; for with respect to participles, and verbal nouns, a previous knowledge of the theme is supposed to be indispensably necessary. See Aphorism X.

A P H O R I S M V .

Words ending with a single consonant, preceded by a single vowel, and with the accent on the last syllable, upon assuming an additional syllable, beginning with a vowel or *y*, double the consonant, as *to abet, an abettor; to begin, a beginning; a fen, fenny; thin, thinnish, &c.* but if a diphthong precede, or the accent be on the preceding syllable, the consonant remains single, as *to toil, toiling, to offer, an offering, &c.*

O B S E R V A T I O N S .

By this rule, which is founded on an intention of ascertaining the quantity of the accented vowel by doubling the consonant, and which would be infinitely useful and agreeable to the analogy of the language, if extended universally, we perceive the impropriety of spelling the adventitious syllables of terminations with double letters, when the accent is not really upon them. Dr. Lowth has justly remarked, that this error frequently takes place in the words *worshipping, counselling, &c.* which having the accent on the first syllable, ought to be written *worshping, counseling, &c.* An ignorance of this

rule has led many to write *bigotted* for *bigoted*, and from this spelling has frequently arisen a false pronunciation; but no letter seems to be more frequently doubled improperly than *l*. Why we should write *libelling*, *levelling*, *revelling*, and yet *offering*, *suffering*, *reasoning*, I am totally at a loss to determine; and unless *l* can give a better plea than any other letter in the alphabet for being doubled in this situation, I must, in the style of Lucian, in his trial of the letter *T*, declare for an expulsion.

A P H O R I S M VI.

Words ending with *y*, preceded by a consonant, upon assuming an additional syllable beginning with a consonant, change *y* into *i*, as *happy*, *happily*, *happiness*; but *y* preceded by a vowel is never changed, as *coy*, *coyly*, *gay*, *gayly*, &c.

O B S E R V A T I O N S.

By attending to this rule we detect a number of typographical errors, from which even our best Dictionary is not free; such as *shyly*, *dryly*, *dryness*, instead of *shily*, *drily*, *driness*. Warburton, in his edition of Pope, every where adheres to his analogy.

Some *drily* plain, without invention's aid,
Write dull receipts how poems may be made.

Essay on Crit.

Though in the first edition of this essay published by Pope himself, we find this word written *dryly*. Why the *y* should be thus converted into *i* is not easily conceived, unless it was feared we should confound words of our own language with those derived from the Greek; for with respect to the distinction of the plural number from the genitive case, as this does not prevent the similitude when a vowel precedes, why should we fear a mistake between *fly* and *fly's*, any more than between *boy* and *boy's*? It is highly probable that the origin of this insignificant and embarrassing change of the *y* into *i*, arose from the taste and sagacity of English printers, who considered the *y* as bearing too little proportion to the number of the other letters, and made this weighty reason the foundation of the alteration. But this alteration once allowed by custom, even a Baskerville must submit to it; and certainty being more the object of language than perfect propriety, it would

would be the last absurdity, to deprive a rule which has nothing else to recommend it, of its only merit—uniformity.

A P H O R I S M VII.

Words ending with any double letter but *l*, and taking *ness*, *less*, *ly*, or *ful*, after them preserve the letter double; as *harmlessness*, *carelessness*, *carelessly*, *stiffness*, *stiffly*, *successful*, *distressful*, &c. but those words ending with double *l*, and taking *ness*, *less*, *ly*, or *ful* after them, omit one *l*, as *fulness*, *skillless*, *fully*.

O B S E R V A T I O N S.

Why one *l* should be omitted when *less* or *ly* is assumed, may be easily conceived to arise from the uncouth appearance three letters of the same kind would have when meeting together; but why the analogy between these simples and compounds should be destroyed when *ness* or *ful* is assumed, is not easy to comprehend; why should we not write *dullness*, *fullness*, *skillful* and *willful*, as well as *stiffness*, *gruffness*, *crossly*, and *crossness*? Nay, the propriety of this orthography makes it almost impossible to root it out entirely, and we find these four words, *illness*, *fellness*, *sbrillness*, and *stillness*, left in our best dictionary with the double *l*, but a greater number of words of the same form having the single *l*, as *smallness*, *talness*, *chilness*, *dulness*, *fulness*, and the long catalogue of words of this termination, as *willfulness*, *blissfulness*, &c. sufficiently show to which orthography custom has the greatest partiality; and indeed as the rage for curtailing our language of double letters seems incurable, the disease will at least be more tolerable if we determine its progress to some uniformity, and since there is no hope of restoring the lost *l* to

<p><i>Smallness</i> <i>Talness</i> <i>Chilness</i> <i>Dulness</i> <i>Fulness</i></p>	}	<p>why should we write</p>	{	<p><i>Illness</i> <i>Fellness</i> <i>Sbrillness</i> and <i>Stillness</i>,</p>
<p>And its numerous compounds.</p>				

unless we are determined to have no rule for our orthography, good or bad? This rule likewise serves to correct several typographical errors in our best dictionary, as *carelessly*, *needlessly*, &c. for *carelesly*, *needlesly*, &c.

A P H O R I S M VIII.

Nefs, *less*, *ly*, and *ful*, added to words ending with silent *e*, do not cut it off, as *paleness*, *guileless*, *closely*, *peaceful*, &c. except *e* is preceded by a vowel, and then it is omitted, as *duly*, *truly*, from *due* and *true*.

O B S E R V A T I O N S.

But what shall we say then to *bluely*, *blunefs*, *rueful*, &c. which, strange as it may seem, would be more agreeably to the general current of orthography, written *bluly*, *blunefs*, *ruful*, &c. the reasons seem to be these, wherever the general laws of pronunciation in compounds supply the place of serviles in simple words, there the serviles are omitted; but *bluly*, *blunefs*, *ruful*, &c. according to the common rule of pronouncing, would be as justly founded as *bluely*, *blunefs*, *rueful*, &c. and at the same time would preclude the possible mistake which might arise if the simples *blue* and *rue* were not understood to be the roots of the words in question; for in this case *blunefs* and *rueful* might be pronounced as if divided into *blu-e-nefs* and *ru-e-ful*; but as it is necessary the spelling should convey the sound of the compound without supposing a previous knowledge of the simples, and without being liable to a double pronunciation, the omission of *e* in *bluly* and *blunefs*, as well as in *duly* and *truly*, seems most analogical. See Aphorism X.

This rule serves to rectify several mistakes of the press in our best dictionary.

<i>Chastly,</i> <i>Chastness,</i> <i>Fertily,</i> <i>Genteely,</i> <i>Blithly,</i>	}	for	<i>Chastely.</i> <i>Chastness.</i> <i>Fertilely.</i> <i>Gentely.</i> <i>Blithely.</i>
--	---	-----	---

Nor can *wholly*, though universally adopted, make us forget that it ought to be *wholly*.

APHORISM IX.

Ment, added to words ending with silent *e*, preserves the *e* from elision, as *abatement*, *incitement*, *chastisement*, *judgement*, &c. but, like other terminations, changes the *y* into *i*, when preceded by a consonant, as *accompaniment*.

APHORISM X.

Able and *ible*, when incorporated into words ending with silent *e*, almost always cut it off, as *blamable*, *curable*, *sensible*, but if *c* or *g* soft come before *e* in the original word, the *e* is then preserved, as *changeable*, *peaceable*, &c.

OBSERVATIONS.

This exception is founded on the necessity of shewing that the preceding *c* and *g* in these words are soft, which might possibly be mistaken, and pronounced hard, if written *changable*, *peacable*, &c. Another exception seems to take place in the compounds of *move* and *prove*, which are generally written *moveable*, *proveable*, &c. but on an inspection into all the compounds of these words in Johnson's Dictionary, we find the *e* so often omitted as to make it very doubtful whether these words are an exception to the general rule or not, for thus they stand,

<i>Proveable</i>	}	<i>Reprovable</i>
<i>Irproveable</i>		<i>Improveable</i>
<i>Unproveable</i>		<i>Improveableness</i>
<i>Unimproveable</i>		<i>Improveably</i>
<i>Unimproveableness</i>		<i>Approvable</i>
		<i>Approvance.</i>

<i>Moveable</i>	}	<i>Removable</i>
<i>Moveably</i>		<i>Irremovable</i>
<i>Moveableness</i>		<i>Immovably.</i>
<i>Unremoveable</i>		
<i>Unremoveably</i>		

The uncertainty of our orthography in this class of words may be presumed to arise from a confused idea of the necessity of ascertaining the sound of the simple by inserting the silent *e*, and the general custom of omitting this letter when words are compounded with these terminations; and it will require some attention to discover to which of these modes

modes of spelling we ought to give the preference; however, till better reasons are offered for a decision, let us suppose the following:

The first object of spelling compound words seems to be merely a conveyance of the sound, without necessarily supposing a knowledge of the simples; that the elements of which the compound is formed, may be sufficient of themselves to suggest their sound. The next object of spelling compounds seems to be an omission of all serviles in the simples which were not actually founded, and whose use may be supposed to be superseded in the compounds by the general laws of English pronunciation, which, contrary to those of the learned languages, suppose every accented vowel to be long and open, which is followed but by a single consonant. Thus the *e* in *deffrable* is omitted, because the common rules of pronunciation indicate that the accent upon *i*, followed by a consonant succeeded by a vowel, has necessarily the same sound as in *desire*. But when the radical letters have not their ordinary sound in the simples, the first law of orthography takes place, and inserts the servile *e* to suggest the sound of the simple, when blended with the compound; for though we are frugal of our letters to a fault, yet when the sound of any of the radical letters might be endangered by such an omission, we then find the *e* preserved. Nor is a previous knowledge of the simple supposed to be a sufficient security, as in *changeable*, *peaceable*, &c. From hence we may gather that every compound word is supposed to convey its own sound agreeably to the common sound of the letters, without the necessity of having recourse to a knowledge of the simples from which it is formed, and therefore as the sound of *o* in *move*, *prove*, &c. is not the general sound of that letter, and consequently if the *e* were not preserved to suggest the simple, it might be liable to the sound of *o* in *rove*, *grove*, *love*, or *shove*, we find it perfectly agreeable to the first general law of English orthography to retain the letter by which alone the sound of the radical part of the word can be ascertained; and therefore as we very justly write *moveable*, *proveable*, &c. so we ought to write *removeable*, *improveable*, &c. *Moving*, *proving*, &c. being affections of the verbs *move* and *prove*, necessarily suggest their simples, and make the insertion of *e* unnecessary. See Aphorism IV.

With

With respect to *reconcilable*, *unreconcilable*, and *reconcilableness*, which we find in Johnson with the *e*, though *irreconcilable*, *irreconcilably*, and *irreconcilableness* are without it, we must class these with *saleable*, *tameable*, *unsbakeable*, *untamable*, and *fixeable*, for as these are the only words of this form in the whole language where the silent *e* is preserved, it is reasonable to suppose that its insertion here was owing either to the inadvertence of the author or printer; for as the preservation of *e* in these words is founded on such reasons as would oblige us to preserve the silent *e* in all compounds where it is now omitted, and consequently entirely alter the current orthography, the omission of it, wherever the preceding vowel or consonant retains its general sound, is certainly the most analogical; as there is no more reason for retaining the silent *e* in *saleable*, *tameable*, &c. than in *blamable*, *tunable*, *consumable*, &c. *titheable* has a proper claim to the *e*, to show that *th* has its flat or obtuse sound.

A P H O R I S M XI.

The verbs to *lay*, *pay*, and *say*, by an unaccountable caprice, form their preterits and participles passive, by changing *y* into *i*, and omitting *e* in the assumed termination *ed*; and instead of *layed*, *payed*, *sayed*, we always see *laid*, *paid*, *said*, which orthography is preserved in their compounds, as *unlaid*, *unsaid*, *repaid*. This is an exception to Aphorism II.

A P H O R I S M XII.

Words taken into composition often drop those letters which were superfluous in their simples, as *Christmas*, *dung-bill*, *bandful*, &c.

O B S E R V A T I O N S.

The uncertainty of our orthography in this article calls loudly for reformation, and nothing can better show the danger of indulging this excision, than a display of the diversity that reigns in our only dictionary, as Johnson's, without a figure, may be called.

<i>To recall</i>	<i>To miscal</i>	<i>Snowball</i>	<i>Overfal</i>
<i>To comptroll</i>	<i>To control</i>	<i>Saveall</i>	<i>Headstal</i>
<i>Chapoll</i>	<i>To enrol</i>	<i>Laystall</i>	<i>To forestal</i>
<i>To underfell</i>	<i>To foretel</i>	<i>Rakebell</i>	<i>To bethral</i>

Bride-

<i>Bridewell</i>	<i>To intbral</i>		<i>Numbskull</i>	<i>Handful</i>
<i>Drawwell</i>	<i>Downfal</i>		<i>Hourglafs</i>	<i>Dareful</i>
<i>Molehill</i>	<i>Muekbil</i>		<i>To repafs</i>	<i>To reinstal</i>
<i>Uphill</i>	<i>Downbil</i>		<i>Unbias</i>	<i>Bias</i>
<i>Handmill</i>	<i>Thumbfal</i>		<i>Quaterstaff</i>	<i>Windfal</i>
<i>Watermill</i>	<i>Downbil</i>		<i>Tipstaff</i>	<i>Waterfal</i>
<i>Windmill</i>	<i>Dungbil</i>		<i>Scurvygrafs</i>	<i>Twibil</i>

The origin of this ridiculous irregularity which has prevailed within these few years, is not hard to guess. Some shallow writers, or perhaps printers, have heard that good authors have complained that our language is clogged by clusters of consonants. This was sufficient to set these smatterers at work on so easy a business as that of unloading the language of its useless letters; and we find under the notion of useless letters, and clusters of consonants, we are near being deprived of the most useful letters we have. But words are evidently mistaken for things. Clusters of consonants to the ear are very different from assemblages of consonants to the eye; these are often no more than double consonants of the same kind, and are sounded as easily as single ones; but those knots of discordant consonants to the ear, however disgustful, are not to be removed without entirely altering the language. The clusters of consonants of which Mr. Addison complains, are those that arise from sinking the intervening vowels in pronunciation, as *drown'd*, *walk'd*, *arriv'd*, for *drowned*, *walked*, *arrived*. The double letters at the end of words, which are ridiculously confounded with what is termed clusters of consonants, as to *install*, *windfall*, *handfull*, &c. make not the least alteration in the sound of the words, and are often so essentially necessary to preserve the true sound from being mistaken, that if we deprive words of one of these double letters, they are in danger of degenerating into a different sound: for what security have we but a previous knowledge of the simples, which is contrary to the first principles of our orthography, that the last syllable of *waterfal* is not to rhyme with the first of *shal-low*, and the last of *handful* with the monosyllable *dull*? In short, as Mr. Elphinston very justly, as well as pleasantly, observes, “Every reader, both young
“and old, must now be so sagacious an analyst as to discern
“at once, not only what are compounds, and what their
“simples,

“ simples, but that *al* in composition is equal to *all* out of it ;
 “ or, in other words, that it is, both what it is, and what it
 “ is not.” Prin. Eng. Lang. vol. i. p. 60.

Thus have I ventured, with a trembling hand, to point out a few of the most glaring inconsistencies under which the orthography of our language labours, without daring to make the least step to a reformation myself: for if ever this be done to any good purpose, it must certainly be by the joint labour of both our universities; till when, no individual can do better service to the orthography of his country than to let it remain as it stands at present in that monument of English philology erected by Johnson. Those who see beyond the surface, regret the many deviations from that only standard of our language by the Greeklings and Latinitasters of this smattering age; and it is certainly to be feared, that if this pruning of our words of all the superfluous letters, as they are called, should be much farther indulged, we shall quickly antiquate our most respectable authors, and irreparably maim our language.

SYLLABICATION.

As the inverted order of arrangement gives us a consistent idea of the structure of the language, so a division of words into syllables directs us in their sound; for the division here adopted, is not founded on any rules drawn from etymology, or the practice of languages essentially different from our own, but on such principles as are the result of the language itself, and arise naturally from the very nature and practice of pronunciation. This part of language, which has been left to chance or caprice, is of all others the most important and delicate. Hardly any thing like a system has been chalked out, or have any rules been given that have produced the least uniformity, or answered any valuable purposes of pronunciation. Till Dr. Kenrick's Rhetorical Dictionary, we have scarcely seen any thing like an attempt to divide words as they are pronounced; but the Latin and Greek syllabication implicitly adopted, to the evident disadvantage of children, and embarrassment of foreigners; and for the very same reasons that Ramus contends, we ought to divide *doctus* and *Atlas*, into *do-ctus* and *A-tlas*; Mr. Ward insists we must separate
magnet,

magnet, poplar, lustre, and reptile, into ma-gnet, po-plar, lu-stre, and re-ptile.

Now if the end of syllabication may be supposed to be the most likely method of directing us to the means, we shall find nothing can be more absurd than such a division. For the object of parceling out a word into distinct portions, seems to be to instruct us either in its etymology or pronunciation. If in the division of words into syllables we have only etymology in view, we must undoubtedly resolve compounds into their simples, without paying the least attention to the sound of these simples, either as united, or in a state of separation. But though this method of syllabication be very proper when we would investigate the origin of a word and shew its derivation, yet when a distinctness of sound is the only object of such a division, as is ever the case in the pronunciation of language, it would be the highest absurdity to clog the instruction with etymological divisions, as these are frequently opposite to actual pronunciation. Here then sound alone should be the criterion of syllabication, and we ought to reduce a compound word to its simple impulses of the voice, as we would a bar of music to its simple notes; for etymologists may surely content themselves with their own divisions where sound is not in question, without disturbing those whose principal object is the conveying of sound, and who consider etymology as entirely independent on it.

Easy, however, as such a division may appear at first view, an attempt to extend it to every word in the language, will soon convince us that the ear in a thousand instances will prove but a very uncertain guide, without a knowledge of those principles by which the ear itself is insensibly directed, and which, having their origin in the nature of language, operate with steadiness and regularity in the midst of the ficklest affectation and caprice. It can scarcely be supposed that the most experienced speaker has heard every word in the language, and the whole circle of sciences pronounced exactly as it ought to be; and if this be the case, he must sometimes have recourse to the principles of pronunciation when his ear is either uninformed or unfaithful. These principles are those general laws of articulation which determine the character, and fix the boundaries of every language; as in every system of speaking, however irregular, the organs must necessarily fall into some common mode
of

of enunciation, or the purpose of Providence in the gift of speech would be absolutely defeated. These laws, like every other object of philosophical enquiry, are only to be traced by an attentive observation and enumeration of particulars, and when these particulars are sufficiently numerous to form a general rule, an axiom in pronunciation is acquired. By an accumulation of these axioms, and an analogical comparison of them with each other, we discover the deviations of language where custom has varied, and the only clew to guide us where custom is either indeterminate or obscure.

Thus by a view of the words ending in *ity* or *ety*, I find the accent invariably placed on the preceding syllable as in *diver'sity*, *congru'ity*, &c. On a closer inspection I find every vowel in this antepenultimate syllable, when no consonant intervenes, pronounced long, as *de'ity*, *pi'ety*, &c. a nearer observation shows me that if a consonant intervene, every vowel in this syllable but *u* contracts itself, and is pronounced short, as *sever'ity*, *curios'ity*, *impu'nty*, &c. I find too, that even *u* contracts itself before two consonants, as *cur'vity*, *taciturn'ity*, &c. and that *scarcity* and *rarity*, (for whose irregularity good reasons may be given) are the only exceptions to this rule throughout the language. And thus we have a series of near seven hundred words, the accentuation of which, as well as the quantity of the accented vowel, are reduced to two or three simple rules.

The same uniformity of accentuation and quantity, may be observed in the first syllable of those words which have the accent on the third, as *dem-on-strat'ion*, *dim-i-nut'ion*, *lu-cu-bra'tion*, &c. where we evidently perceive a stress on the first syllable shortening every vowel but *u*, and this in every word throughout the language, except where two consonants follow the *u* as in *cur-vi-lin'e-ar*, or where two vowels follow the consonant that succeeds any other vowel in the first syllable, as *de-vi-a'tion*; or lastly, where the word is not evidently of our own composition, as *re-con-vey'*; but as *u* in the first syllable of a word, having the accent on the third, has the same tendency to length and openness as was observable when it preceded the termination *ity*; I find it necessary to separate it from the consonant in *bu-ty-ra'ceous*, which I have never heard pronounced, as well as in *lu-cu-bra'tion*, which I have, and this from no pretended agreement with the quantity of the Latin words these are derived

from, for in the former word the *u* is doubtful; but from the general system of quantity I see adopted in English pronunciation. This only will direct an English ear with certainty; for though we may sometimes place the accent on words we borrow from the Greek or Latin on the same syllable as in those languages, as *acu'men*, *elegi'ac*, &c. nay, though we sometimes adopt the accent of the original with every word of the same termination we derive from it, as *assidu'ity*, *vi-du'ity*, &c. yet the quantity of the accented vowel is so often contrary to that of the Latin and Greek, that not a shadow of a rule can be drawn, in this point, from these languages to ours. Thus in the letter in question, in the Latin *accumulo*, *dubius*, *tumor*, &c. the first *u* is every where short; but in the English words *accumulate*, *dubious*, *tumour*, every where long. *Nuptialis*, *murmur*, *turbulentus*, &c. where the *u* in the first syllable in Latin is long, we as constantly pronounce it short in *nuptial*, *murmur*, *turbulent*, &c. Nor indeed can we wonder that a different œconomy of quantity is observable in the ancient and modern languages, as in the former, two consonants almost always lengthen the preceding vowel, and in the latter as constantly shorten it. Thus, without arguing in a vicious circle, we find that as a division of the generality of words as they are actually pronounced, gives us the general laws of syllabication, so these laws once understood, direct us in the division of such words as we have never heard actually pronounced, and consequently to the true pronunciation of them. For these operations, like cause and effect, reflect mutually a light on each other, and prove, that by nicely observing the path which custom in language has once taken, we can more than guess at the line she must keep in a similar case, where her footsteps are not quite so discernible. So true is the observation of Scaliger: *Ita omnibus in rebus certissima ratione sibi ipsa respondet natura.* De causis Ling. Lat.

PRONUNCIATION.

Syllabication having found for its object, and the association of similar terminations contributing so largely to facilitate syllabication, it is evident that the most obvious advantage of this inverted prospect of our language, is the assistance it affords to pronunciation. In other dictionaries, words of a to-
tally

tally different form promiscuously succeed each other, while in this we find the words sorted by their species as well as letters. It is recommended by Mr. Sheridan, in his Lectures on Elocution, to select those words which we find difficult to pronounce, and to repeat them frequently till a habit is acquired. This rule is founded on good sense and experience, and ought to be carefully attended to by foreigners and provincials; but if the difficulty of pronouncing lies in the latter syllables, as is most frequently the case, what immense labour must it be to select these from a common dictionary? But in this, how readily are we introduced to the whole species of any termination at once, and by seeing the whole class, gain an intimate acquaintance with its specific orthography and pronunciation; for by this means, not only a more precise idea of the spelling of words is obtained, and an opportunity of habituating the organs to every difficult termination, but the dependance of accent on termination is at large displayed, and a habit induced of associating the stress with its correspondent ultimate syllable. This view of accent will show us that our language is much less irregular than is generally imagined, and we soon discover termination to be, as it were, a rudder to accent, a key that opens to us an unexpected scene of uniformity, and proves, as Mr. Elphinston admirably expresses it, "that speech, the peculiar glory of rational intercourse, is neither given nor guided by an arbitrary power, but that use in language, as in all nature, is no other than the constant agency of harmony and of reason." Prin. Eng. Lang. Vol. i. p. 3.

There are few but must observe with what difficulty children, and even youth, acquire a secure pronunciation of the technical terms in the learned professions, and how frequently they are at a loss for the sound of an English word they have not been accustomed to, even at the time they are making great advances in the learned languages. This observation will naturally lead us to presume that the present work, of all others, must be the most useful for such schools as are not entirely negligent of their mother tongue. Here the words of any difficulty are selected in a moment, and by being repeated a few times over in the order they lie, will imbue the ear with such an accentual rhythmus, if I may call it so, as will infallibly regulate the pronunciation ever after.

The division and accentuation of words according to the length or shortness of the vowels, is an advantage to pronunciation which must strike the most cursory inspector. The utility of such a method, if just and agreeable to the analogy of the language, will be readily acknowledged by those who are so frequently disappointed in the inspection of other dictionaries. It is not a little surprising that a method of accentuation, so peculiarly useful, should, till lately, have been almost entirely neglected. This defect in the generality of our dictionaries did not escape the judicious Mr. Sheridan, who insists largely on the utility of placing the accent on the consonant, when the preceding vowel is short, and on the vowel, when the vowel itself is long; and though this does not specify the kind of vowel, with respect to sound, which is the subject of accentuation, it at least determines its quantity, and is so far infinitely superior to the common method of placing the accent on the vowel, whether it be long or short.

Another and almost exclusive advantage of the present work is, that every monosyllable which swerves from the general rule of pronunciation, is rhymed with such a word as cannot possibly be pronounced otherwise than it is written; or if this cannot be done, it is spelled in such a manner as to take away all ambiguity. Thus as the more general sound of the diphthong *ea* is like *e* long and open in *here, mere, &c.* wherever it deviates from this sound, a rhyme is inserted to ascertain its pronunciation; *head* therefore is rhymed with *bed*, that it may not be liable to the Scotch pronunciation of this word, as if spelled *heed*; and *great* is rhymed with *bate*, that it may be distinguished from the sound the Irish are apt to give it as if spelled *greet*. A *bow* (to shoot with) is rhymed with *go*, and *bow* (an act of reverence) with *cow*; and *prove, dove, &c.* are determined in their pronunciation by the univocal orthography *proove, duvv, &c.* by this means the stamina of our language, as monosyllables may be called, are freed from ambiguity of sound, and compounds rendered easier by fixing the pronunciation of their simples.

R H Y M E.

The last, and perhaps the least, advantage of the following work, is the complete collection of all the rhymes in the language. However insignificant it may seem in this respect, it

is at least new. For though Byshe has given us a Dictionary of Rhymes at the end of his Art of Poetry, his Dictionary, if it may be called so, does not contain six thousand words, when Johnson's Dictionary, to which this approaches nearer than any other, has very few short of forty thousand. Here then, as in the French *Diétionnaire des Rimes* of *Richelet*, the whole language is arranged according to its similar endings, and the English are no longer unfurnished with an assistance to versification, which *Abbé du Bos* tells us the French poets, *Quoi qu'ils en disent ils ont tous ce livre dans leur arriere cabinet.* But had the author seen no farther advantage in this work than barely furnishing similar sounds for the purposes of poetry, he should have thought his labour ill bestowed. It is by no means his intention to vindicate the cause of rhyme to the least prejudice of a nobler verse, which is the peculiar glory of the English as a living language; nor will he insist on the proofs both from nature and experience, that rhyme may be sometimes admitted to advantage, while *Waller*, *Dryden*, and *Pope* are in every body's hands *. It will only be necessary to observe, that for fear those who have been accustomed to the common dictionary of rhymes annexed to Byshe, should find a difficulty in discovering words, by this new arrangement, an Index of Rhymes, much more copious and correct than any hitherto published, is added, in which the old method of classing the words is continued, and a new and numerous class of allowable rhymes pointed out, with authorities for their usage from our best poets; but for a more satisfactory account of this part of the work, see the Preface to the Index, at the end of this Dictionary.

* See the subject of rhyme judiciously discussed by *Mr. Rice*, in his Art of Reading.

From the attention paid to the press, I was in hopes to have pronounced this work absolutely free from typographical errors; but though this was a vain expectation, I may, perhaps, boast that fewer mistakes of the press have happened in the printing of this work, than in any other of the same size, equally liable to them. *Angelica* with a double *l*, instead of a single one, and the omission of *i* in *Bargainee*, are the only two which I recollect to be misspelled; and the misplacing of an accent or hyphen, though so difficult to avoid, is scarcely to be met with throughout the whole.

AN IDEA of the ARRANGEMENT of WORDS in this DICTIONARY.

AS in other dictionaries words follow each other in an alphabetical order according to the letters they *begin* with, in this they follow each other according to the letters they *end* with. All words therefore that *end* with *a* are placed first in this Dictionary, as all those that *begin* with *a* are placed first in other dictionaries; those that *end* with *b* are placed next, and so of the rest. The directing letters at the top of each page, are likewise in the same order; that is, they are the last letters of words instead of the first.

DIRECTIONS FOR FINDING WORDS.

In looking for a word, the last letter is to be sought first, the last but one next, and so on from the last to the first letters of a word in an order, exactly contrary to that of other dictionaries. Thus if I want to find the word *Idea*, I must first look for *a*, among those words which end with *a*; these I find in the page opposite to this. The next letter I want is *e*, I therefore look among those words that end with *a*, for a word whose last letter but one is *e*, and find it in the word *Panacea*; the seventeenth word from the top; the next letter *d*, I look for among those words that end with *ea*, and find it in the word after *Panacea*, which is the word I sought. So that for the last letter of a word, I look among those words ending with the same letter, for the last letter but one of a word, I look among the last letters but one of these words, and so of the rest.

It must be particularly noted, that the directing letters on the top of each page are to be looked for in the same order; that is, from the right hand to the left.

The best way to avoid confusion, will be to look for the letters one by one, and to begin with the first word of every class, and so proceed downwards till the word is found. Thus if I want to find the word *Alphabet*, I keep the last letter *t* in my mind, and turn to that part of the dictionary where the words ending with *t* are classed, which is near the end. The first word of this class I find to be *at*; the next letter I want is *e*, I therefore run my eye down the last letter but one of this class till I come to *bet*, the next letter I want is *a*, which leads me to fix my eye upon the fourth letter from the last, which brings me to *abet*, and so of the rest.

As this arrangement is perfectly simple, two or three trials will render it as intelligible as the common order, especially if the word we look for be first written down, and carried along with the eye in its search.

I N D E X of PERFECT and ALLOWABLE RHYMES.

AS the principal object of the preceding syllabic Dictionary was to throw light on the structure, orthography, and pronunciation of our language, it was necessary to adhere strictly to the inverted order of arrangement, that terminations of similar orthography might be classed together, though those of similar sound would sometimes by this means be separated; but as the inverted position of the words, though the simplest that could be chosen for this purpose, may possibly at first embarrass the inspector for poetry, an index of rhymes is annexed in the same order as in Poole and Byshe, though much more copious and correct, besides a reference to an almost infinite number of allowable rhymes, with authorities for their usage from our best poets.

As an index to allowable rhymes is an attempt perfectly new, it may not be improper to make a few observations with respect to its utility, and answer some objections to which it may be liable.

Obs. 1. Whatever has been constantly practised by our most harmonious poets may be safely presumed to be agreeable to the genius of our poetry; it is highly probable that our prosody has passed its meridian, and that no reformation can possibly be made without injuring it. The delicate ears of a Pope or an Addison, would scarcely have acquiesced in the usage of imperfect rhymes, and sanctified them so often by their practice, if such rhymes had been really a blemish. The same masculine force that supports our poetry without the assistance of any rhyme at all, seems to exempt it from that servile attention to perfectly similar rhymes to which the French versification is invariably bound. Nay so far from a defect, that there seems to be sometimes a beauty in departing from a perfect exactness of rhyme, as it agreeably breaks that sameness of returning sounds on the expecting ear, which in poetry, perhaps as in music, requires something like an occasional discord to make even harmony itself more agreeable.

Obs. 2. But though an English ear will freely admit of a rhyme between a long and short sound of the same vowel, and sometimes even between the long and short sounds of different vowels, yet these vowels that are suffered to rhyme are not of a different nature though called by a different name. The inaccuracy with which they are denominated has but very little influence on the practice of our poets, who trying them by the only

infallible

P R E F A C E.

infallible touchstone, the ear, discover the relations between similar vowels better than by a grammatical analysis. By the usage of the poets we find the vowels frequently associated according to their radical sound, and that an union is lawful between any vowels of the same family, as it may be called though the name may be different, therefore as the *e* in *led*, is by no means the real short sound of that letter as heard in its name, or in the word *glede*, it is no wonder if the poets very often associate it with the slender *a* as heard in *lade*, and of which it is really the short sound. The same may be observed of almost every other imperfect rhyme we meet with, if the family sound of the vowel be preserved, the ear acknowledges the affinity; if a vowel of a totally different sound be assumed, the ear immediately detects the incongruous mixture.

Thus the different sounds of the vowels *i, e, a, o, u*, slide into each other by an easy gradation, each of which is sufficiently related to the preceding and succeeding sound to form what is called an allowable rhyme. And though it must be confessed that poets have sometimes abused the liberty of rhyming, and wounded the ear by an association of discordant vowels; yet this is no argument against the occasional use of such rhymes as are but gentle inflexions of the same radical sound, as these circulate freely through our best compositions, and actually form a part of our prosody.

Obs. 3. It will be necessary therefore to observe, that although authorities are not brought for the usage of every individual allowable rhyme, the species of these rhymes, if I may call them so, are amply and repeatedly illustrated. For the same ear which allows *glass* to rhyme with *place*, or *place* with *peace* and *distress*, will permit *decay'd* to rhyme with *shed*, and *shade* with *mead*; for the consonants with which they terminate do not alter the nature of the preceding vowels, or occasion any diversity in the quality of the rhyme. It would therefore have been sufficient to have adduced a much smaller number of poetical examples than are here given; as they are all founded on the same principles, and must necessarily stand or fall together.

It may perhaps be objected that a work of this kind contributes to extend poetic blemishes, by furnishing imperfect materials and apologies for using them. But it may be answered, that if these imperfect rhymes were allowed to be blemishes, it would still be better to tolerate them, than cramp the imagination by the too narrow boundaries of exactly similar sounds. A want of perfect rhyme, if a real imperfection, is fully compensated by gaining access to a more eligible turn of thought; the most exact and harmonious rhyme would be dearly purchased

P R E F A C E.

chased at the expence of the most delicate abatement in the strength or beauty of an expression. And as Byshe supposes that the difficulty of finding rhymes has been the cause that such indifferent ones have been frequently chosen, so it may with as much reason be presumed, that the want of recollecting the licenses of our best writers, and how agreeable they occasionally are to the nature of our poetry, has often been the cause either of choosing a weak expression for the sake of perfect rhyme, or of relinquishing a valuable one for no other reason than the want of it.

DIRECTIONS for finding RHYMES in the INDEX.

The simplest idea of the rhymes in this arrangement is, that the words are divided into five classes according to the vowel in their terminations: the first vowel in the last syllable of every word is first to be sought for, and every other subsequent letter in its natural order, that is from the left hand to the right. Thus if I want a rhyme to *hand*, I look in the first class of vowels *a*, the next letter is *n*, which obliges me to proceed till I come to *ban*, *bran*, &c. the next letter is *d*, which I find after *ANCH*, and before I come to *ANE*. If I want a rhyme to *command*, *a* is the first vowel in the last syllable, and I proceed therefore as in *hand*, and so of every other; but as every arrangement of words but the natural is attended with difficulty, I shall endeavour to make the rule for finding rhymes as plain as possible, by adopting the directions of Byshe, omitting that only which relates to the letter *y*, as custom has entirely excluded the termination *ie* in the words *desy*, *rely*, &c. which in his time were frequently written *desie*, *relie*, &c.

1. In looking for a word consider the five vowels *A, E, I, O, U*, and begin at the vowel that precedes the last consonant of the word; for example, to find *persuade* and the words that rhyme to it, *D* is the last consonant, *A* the vowel that precedes it, look for *ADE* and you will find *made*, *fade*, *invade*, and all the other words of that rhyme.

2. In like manner, if a word end in two or more consonants, begin at the vowel that immediately precedes the first of them; for example *land*, *N* is the first of the final consonants, *A* the vowel that precedes it, see *AND* and you will find *band*, *stand*, *command*, &c.

3. But if a diphthong, that is to say two or more vowels together, precedes the last consonant or consonants of a word, begin at the first of these two vowels; thus, to find the rhymes to *disdain*, look not for *IN* but for *AIN*, and you will find *brain*, *chain*, *gain*, &c.

P R E F A C E.

4. To find a word that ends in a diphthong preceded by a consonant, begin only at the first vowel of the diphthong; for example, to find the rhymes to *subdue*, look for *UE*, and you will find *clue*, *due*, *ensue*, &c.

5. All the words that end in a single vowel preceded by a consonant are found by looking for that vowel only, except always the words that end in mute *E*, which are constantly found by the same method that has been already prescribed for finding the rhymes to *persuade*, whose final *E* is silent, and serves only to lengthen the sound of the *A* in the last syllable.

A D V E R T I S E M E N T.

CARE has been taken in the compiling of this Index to class rhymes together with the most scrupulous precision. Such as are called perfect rhymes are exactly similar, those that differ by nicer shades are called nearly perfect, and the rest allowable only. So that this collection of words is in some measure a dictionary of pronunciation, and may answer very useful purposes to foreigners and provincials, who by understanding the sound of one word may become acquainted with the pronunciation of a whole class, and at the same time avoid being misled by the licences of poets in their frequent usage of the looser and less perfect rhymes.

No notice need be taken of the advantages arising from instances being given of plurals and participles, as *lays*, *days*, *obey'd*, *play'd*, &c. as this will immediately appear upon inspection, which, with many other improvements, renders this Index of Rhymes, entirely independent on its connexion with the Pronouncing Dictionary, greatly superior to every other work of the kind in our language.

Y, See I E.

I have purposely omitted many licenses I might have produced, as judging them in reality too licentious. Among these, however, I do not reckon this of Sternhold and Hopkins, of Gothic memory :

And how he did commit their fruits
Unto the caterpillar,
And eke the labour of their hands
He gave to the grasshopper.

These reverend versifiers of the Psalms, who for centuries have been the constant butt of criticism, are now fallen below it. The rhymes I have past by are such as belong to more respectable names.

With kind embraces such as I	
Twist about my loving <i>she</i> .	Oldham.
Draw next the patron of that <i>tree</i> ,	
Draw Bacchus and soft Cupid <i>by</i> .	Oldham.

I N D E X.

My parents are propitious to my *wish*,
And she herself consenting to the *bliss*. Dryden.

One sees her thighs transform'd, another *views*
Her arms shoot out and branching into *boughs*. Addison.

Wit kindl'd by the sulph'rous breath of *vice*,
Like the blue light'ning while it shines *destroys*. Pope.

But notwithstanding these and some other vices of the same kind which some of our most respectable poets have inadvertently fallen into, there are few inspectors into this Index, but must observe an obvious analogy between the vowels in the generality of the instances produced; and that however uncoothly they may sound when pronounced alone, they give no disgust to an English ear, when introduced at proper intervals; but it is not so much my intention to apologize for the use of these imperfect rhymes, as to shew how they are used, and upon what authority. It is certain they may be used too frequently, and that they are far from being all equally agreeable to the ear. In short, the same taste and delicacy are necessary in this, as in the more essential part of poetry; beauties and blemishes differ but by nice shades, and it is the master alone who can discern that point where boldness degenerates into harshness, and correctness into frigidity.
